

Greetings. I would like to comment on the BPL issue. This is a BAD idea! Power lines are not designed to support this type of communications in such a way as to prevent interference. Studies have been performed that prove that there will be SIGNIFICANT interference from BPL to radio services in the HF spectrum. It would be a grave error on the part of the FCC to rule in favor of BPL! Other means exist to provide broadband internet access including cable tv, DSL, and direct wireless. I urge you to not allow this potential interference nightmare to take place.

Thank you for you time.

Regards,

Marty Ray
